

IMMUNO-ONCOLOGY: USING THE BODY'S IMMUNE SYSTEM TO TREAT CANCER

Attend our **FREE** event to learn about new
immunotherapy treatments for common cancers.

Dr. Phillip Reid

Phillip D. Reid MD will discuss what patients should know about new immunotherapy treatments for common cancers.

Immunotherapy uses your body's own immune system to fight cancer. It enables the immune system to recognize, target and eliminate cancer cells wherever they are in the body.

Issues to be addressed include:

- What is cancer immunotherapy?
- How does immunotherapy work in your body?
- How is immunotherapy different from other treatments?
- What side effects might be experienced while on immunotherapy?
- What types of cancers can immunotherapy treat?
- Can immunotherapy be used together with other treatments, like chemotherapy, radiation, surgery, targeted therapy and another immunotherapy?

IMMUNO-ONCOLOGY: USING THE BODY'S IMMUNE SYSTEM TO TREAT CANCER*

Presented by: Dr. Phillip Reid, Medical Oncologist

Light refreshments
will be provided!

Tuesday, April 24th, 2017 • 7:00 – 8:30 pm
